ROSA MULTIFLORA THE MIRACLE ASIATIC SHRUB

A Practical, Living Farm Fence

2H8—A cheap, stock-tight fence, quick, at 40% less cost than woven wire fence. Do not compare with the old time, space, and labor wasting osage orange hedge. Multiflora rose is different—plant as a permanent hedge, but you need not trim and if you ever want to move hedge it is quickly destroyed with 2-4-D or by clipping.

The easily grown plants make excellent cover, nesting facilities, and provide winter food for wild life. The natural propagation and successful wintering of game assures a growing supply for sportsmen.

Recognized and developed by U. S. Soil Conservation Service. Trial fences have been planted in the East, South, Middle West, and North West and proven successful.

The attractive plants grow 6 to 8 feet tall and 5 to 7 feet wide. Present recommendations are to plant 1 foot apart in a single row for livestock fence. The general use of Rosa Multiflora is just beginning but its value for cheap fence, game management, windbreak, protection to soil and crops will last for generations.

All evergreens for shipping will be fresh dug from our field bare root and wrapped in moist peat. Present day delivery and packing costs make it too expensive to ship balled and burlapped. Our experience shows that bare root evergreens deliver better and grow just as well. Balled and burlapped evergreens available when you drive to the nursery.

HOW TO PLANT EVERGREENS

Plant evergreens immediately upon arrival as they have resin in their sap. Keep from sun and air. Dig hole 8 to 10 inches larger than the ball of earth or root spread. Set evergreen 1 to 2 inches deeper than soil marks on the trunk of the evergreen. Fill hole half full of rich top soil, firm well, then fill hole with water.
